Ideation Phase
Brainstorm & Idea Prioritization Template

Date	16 October 2026
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming encourages team members to share ideas, explore possible solutions, and prioritize features by impact and feasibility. This template applies the process to a ServiceNow-based Metro Ticket Generating System.

Project overview: Digitize metro ticket booking using ServiceNow to enable fast, accessible, and automated ticket generation through QR codes. Users book tickets by selecting stations and travel details; the system calculates fares automatically and generates digital tickets instantly. Service Catalog, Flow Designer, and Notifications support a seamless travel experience.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Plan a digital ticket-booking workflow using ServiceNow tools, focusing on ease of use, accurate fares, QR-based tickets, and timely updates.

10 minutes to prepare
1 hour to collaborate
2–8 people recommended

➜ Before you collaborate

[A] Team gathering
Include members who can discuss passenger needs, catalog forms, automation, and notifications.

[B] Set the goal
Define the booking details, fare calculation, QR ticket, and confirmation process.

[C] Prepare examples
List sample stations, travel details, fare rules, and ticket confirmation scenarios.

1 Define your problem statement

PROBLEM
How might we digitize metro ticket booking in ServiceNow so passengers can select source and destination stations and travel details, receive an automatically calculated fare, and get a digital QR-code ticket instantly, with automated flow processing and notifications?

Key brainstorming rules

Stay focused on metro booking. Encourage creative ideas, defer judgment, listen to team members, and prioritize practical features.

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

List ideas that support the ServiceNow metro booking process, from capturing passenger details to generating and notifying the user about the QR ticket.

Team Member 1 • Service Catalog item for metro ticket booking • Form fields for source and destination stations • Capture travel date, time, and passenger count	**Team Member 2** • Validate required booking details • Prevent same source and destination • Display clear messages for invalid entries	**Team Member 3** • Automatically calculate fare from station/travel details • Display fare before submission • Maintain fare rules or station fare data	**Team Member 4** • Flow Designer starts after catalog submission • Automate ticket record creation • Generate a unique booking or ticket reference
Team Member 5 • Generate digital ticket with QR code • Include source, destination, travel details, and fare • Make ticket details easy to access	**Team Member 6** • Send booking confirmation using Notifications • Notify user when ticket is generated • Include ticket reference and QR ticket details	**Team Member 7** • Test catalog form and validation rules • Test fare calculation for different journeys • Verify Flow Designer execution and notifications	**Team Member 8** • Keep booking steps simple and accessible • Track booking status if included in scope • Future ideas: cancellation, refund, or ticket verification

3 Group ideas

Group related ideas into clear functional areas for the ServiceNow-based Metro Ticket Generating System.

1. Capture booking details through Service Catalog				
Catalog item for metro tickets	Source station	Destination station	Travel details and passenger count	Required-field validation

2. Calculate fare and process booking			
Fare rules based on journey	Automatic fare calculation	Show fare before submission	Create booking/ticket record

3. Generate QR-code digital ticket			
Unique ticket reference	QR code linked to ticket details	Show route, travel details, and fare	Make ticket available digitally

4. Automate the process with Flow Designer			
Trigger flow on submission	Create/update ticket record	Coordinate fare and ticket steps	Update booking status

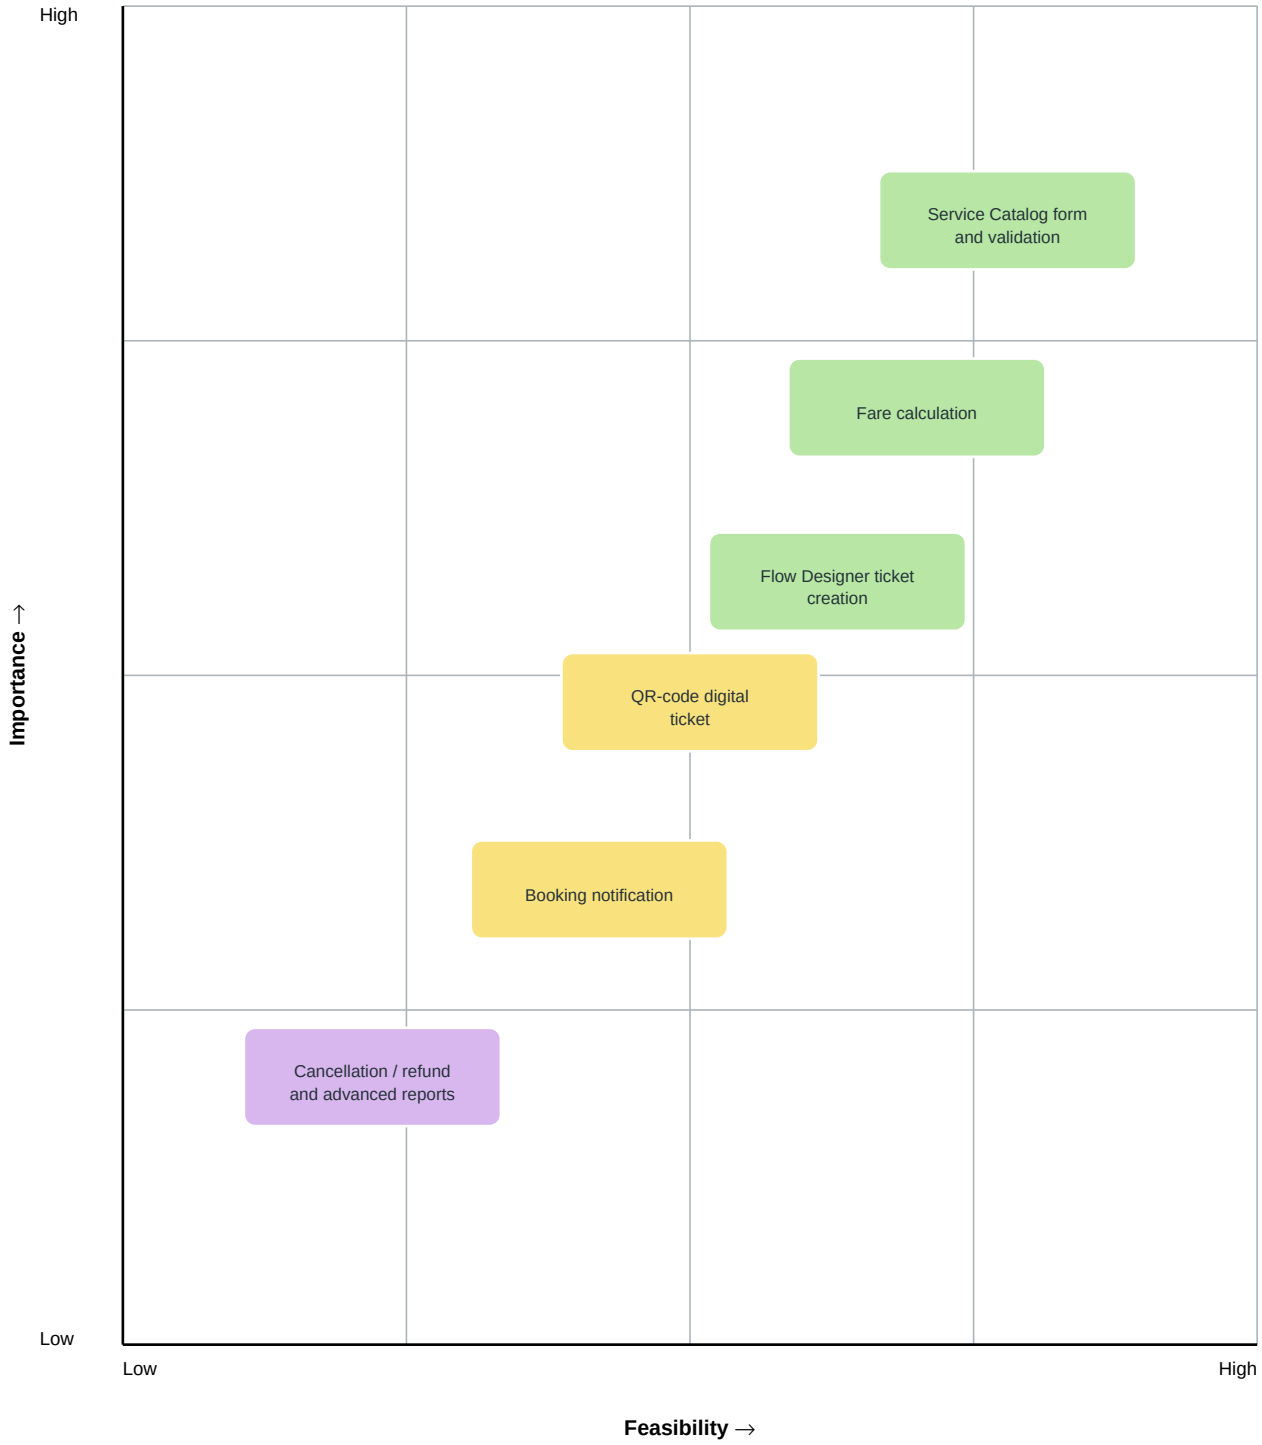
5. Notify passengers and test workflow				
Confirmation notification	Send ticket/QR details	Test invalid booking inputs	Verify flow and notifications	Future: cancellation or validation

Expected result: A passenger submits booking details through the Service Catalog; the fare is calculated, Flow Designer automates ticket creation, a QR-code digital ticket is generated, and a notification confirms the booking.

Step-3: Idea Prioritization

4 Prioritize

Prioritize features by passenger impact and implementation feasibility. Core booking and ticket generation should be completed before optional enhancements.



Importance: How much does the feature improve the passenger booking experience? **Feasibility:** Can it be implemented with the available ServiceNow tools and project time?

Recommended priority: Service Catalog booking form → station/travel-detail validation → automatic fare calculation → Flow Designer ticket creation → QR-code digital ticket → Notifications. Consider cancellation, refunds, and advanced reporting as later enhancements if required.
