Customer Journey Map: Metro Ticketing System

Scenario: A passenger books a metro ticket through a ServiceNow-based system. They select stations and travel details, the system calculates the fare, generates a digital QR-code ticket, and sends a notification.

CUSTOMER JOURNEY	AWARENESS	ENTER	ENGAGE	EXIT	EXTEND
Stage question	How does the passenger realize a ticket is needed?	What does the passenger do to start booking?	What information is entered and reviewed?	What happens after the booking is submitted?	What happens after the ticket is generated?
Steps	Looks for a simple digital ticket-booking option.	Opens ServiceNow portal and chooses the metro booking catalog item.	Chooses stations, enters travel details, checks fare, and submits.	Automated flow creates the ticket and QR code and confirms the booking.	Receives notification and accesses the QR ticket for the journey.
Interactions	Metro travel need and available booking channels.	ServiceNow portal and Service Catalog form.	Station fields, travel details, fare display, submit action.	Flow Designer, booking record, QR ticket, confirmation screen.	Notification with booking reference and QR ticket; ticket check at travel time.
Goals & motivations	Find a convenient way to book a trip.	Start quickly with clear instructions.	Enter correct details and know the fare before confirming.	Get a ticket instantly without relying on a manual counter.	Access the ticket easily and travel with confidence.
Positive moments	Digital booking option is easy to find.	Form is simple and accessible.	Fare is calculated automatically and shown before submission.	QR-code ticket is generated instantly with clear confirmation.	Notification makes ticket details easy to retrieve.
Negative moments	Passenger may not know where online booking starts.	Unclear labels or too many fields can slow booking.	Wrong station selection or unclear fare can cause uncertainty.	Delay or failure in QR generation may leave the passenger unsure.	Lost notification or unreadable QR code may cause inconvenience.
Areas of opportunity	Make the booking option prominent on the portal.	Use clear station lists and only necessary fields.	Validate station selections and show a clear fare breakdown.	Add error handling, unique ticket reference, and success status.	Allow ticket retrieval by reference and ensure the QR code is scannable.
