Planning Logic

Metro Ticket Generating System using ServiceNow

Sprint, Epic, User Stories, Story Points & Velocity

Planning terms

Sprint: A fixed period in which the team works to complete a set of tasks.
Epic: A large task or project broken into smaller stories across sprints.
Story: A small task that forms part of an epic.
Story Point: A number representing the effort required for a story. This plan uses 1, 2, 3, and 5 points, following the reference's Fibonacci-style scale.

Sprint 1

Epic	User Story ID	Metro Ticketing User Story	Story Points
Ticket Booking (Epic 1)	MTS-1	Open Metro Ticket Booking from the Service Catalog.	3
Ticket Booking (Epic 1)	MTS-2	Select source and destination stations using the booking form.	2
Input Validation (Epic 2)	MTS-3	Validate mandatory station and travel-detail fields.	1
Booking Confirmation (Epic 3)	MTS-4	Show a confirmation message after successful submission.	1
Ticket Generation (Epic 4)	MTS-5	Generate a digital ticket with a QR code for a valid booking.	3
Fare Calculation (Epic 5)	MTS-6	Calculate the fare automatically using configured fare rules.	2
Workflow Automation (Epic 6)	MTS-7	Use Flow Designer to process the booking and create the ticket record.	3

Total Story Points in Sprint 1 = 3 + 2 + 1 + 1 + 3 + 2 + 3 = 15

Sprint 2

Epic	User Story ID	Metro Ticketing User Story	Story Points
Ticket Access (Epic 7)	MTS-8	Allow passengers to retrieve or reopen their generated digital ticket.	2
Notifications (Epic 8)	MTS-9	Send a notification containing booking confirmation and ticket access details.	5
Ticket Management (Epic 9)	MTS-10	Allow administrators to review stored booking and ticket records.	2

Total Story Points in Sprint 2 = 2 + 5 + 2 = 9

Total Story Points & Velocity

Total story points = Sprint 1 (15) + Sprint 2 (9) = 24.
Number of sprints = 2.
Velocity = Total Story Points Completed ÷ Number of Sprints = 24 ÷ 2 = 12 story points per sprint.

Scope note: These are proposed planning estimates based on your Metro Ticket Generating System description. The reference defines velocity using completed story points, so use 12 as the planned average only if these 24 points are actually completed across the two sprints.
