Project Design Phase
Proposed Solution Template

Date	17 October 2026
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	2 Marks

Proposed Solution Template

The project team can use the following template to describe the proposed Metro Ticket Generating System. The solution focuses on digitizing metro ticket booking through ServiceNow with automatic fare calculation, QR-code ticket generation, and booking notifications.

S. No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Metro passengers may experience queues, delays, and uncertainty when booking tickets through manual or disconnected processes. They need a quick and accessible way to select stations, understand the fare, and receive a confirmed ticket.
2.	Idea / Solution description	Configure a Metro Ticket Booking item in the ServiceNow Service Catalog. Passengers select source and destination stations and enter travel details. The system validates the request, calculates the fare using configured rules, and uses Flow Designer to automate booking and ticket creation. A digital ticket with a QR code is generated, and Notifications provide booking confirmation.
3.	Novelty / Uniqueness	Combines station selection, automatic fare calculation, workflow automation, QR-code digital ticket generation, and confirmation notifications in one ServiceNow-based booking process, reducing the need for separate manual steps.
4.	Social Impact / Customer Satisfaction	Passengers can book more conveniently, view the fare before completing the request, and receive ticket details digitally. Clear confirmation can reduce uncertainty, while automated processing can reduce repetitive work for the service team.
5.	Business Model (Revenue Model)	The system is proposed as a digital service focused on passenger convenience and operational efficiency, rather than an assumed external revenue model. Potential value includes less manual handling, fewer avoidable booking errors, and more consistent ticket processing.
6.	Scalability of the Solution	The station list, fare rules, booking fields, and workflow can be extended as requirements change. Additional capabilities such as ticket retrieval, cancellation/refund handling, payment integration, or QR validation at station gates can be considered as future enhancements if required.
