Project Design Phase
Solution Architecture

Date	17 October 2026
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	4 Marks

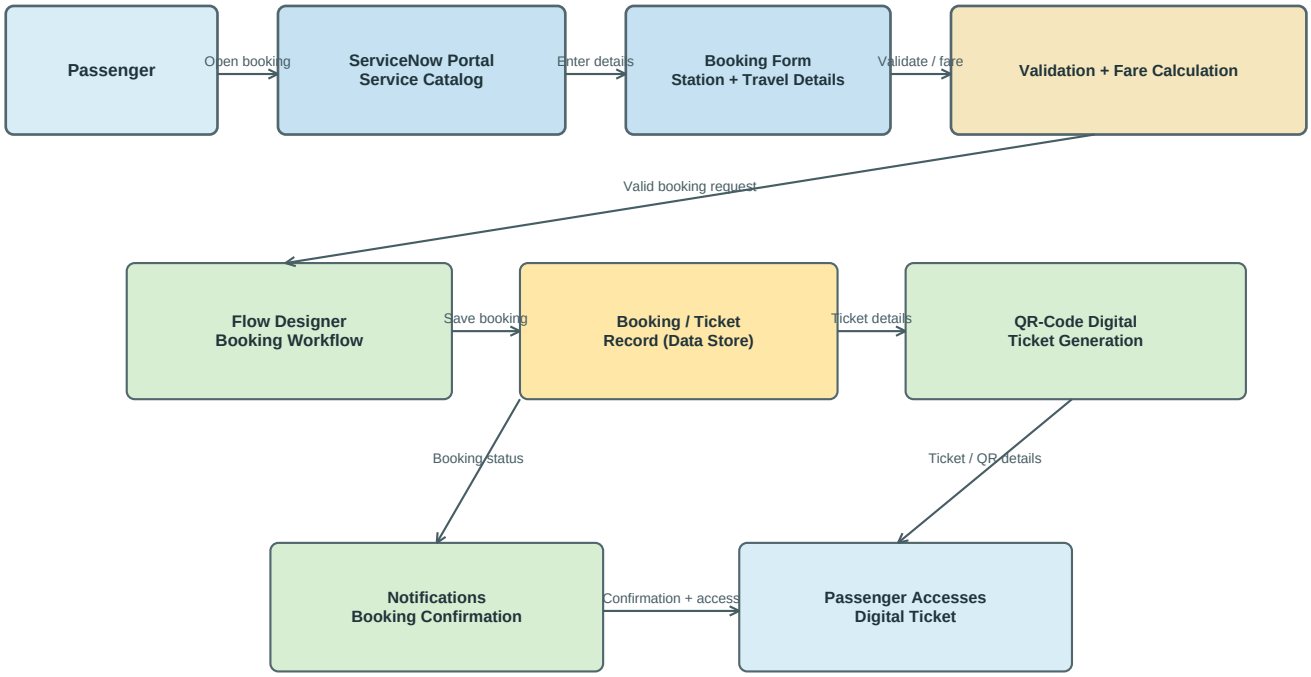
Solution Architecture

Solution architecture bridges the passenger's ticket-booking needs and the technical components used to deliver the service. It describes how the ServiceNow portal, Service Catalog, fare calculation, Flow Designer, ticket records, QR-code ticket generation, and Notifications work together. The architecture is intended to make ticket booking fast, accessible, and automated.

Goals of the solution architecture:

• Select a suitable technical approach to solve the metro ticket-booking problem.
• Describe the system components and how they interact.
• Define the key features and requirements for implementation.
• Provide a structure that supports development, testing, and future improvements.

Solution Architecture Diagram: Metro Ticket Generating System



Architecture flow: Passenger → Service Catalog → validation/fare calculation → Flow Designer → ticket record → QR ticket and notification.
