Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	17 October 2026
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed Metro Ticket Generating System.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Ticket Booking	• Open the Metro Ticket Booking item through the Service Catalog. • Select source and destination stations and enter travel details.
FR-2	Field Validation & Fare Calculation	• Validate mandatory booking fields and ensure source and destination stations are different. • Calculate and display the fare using configured fare rules.
FR-3	Ticket Generation & Workflow Automation	• Use Flow Designer to process a valid booking and create a booking/ticket record. • Generate a digital ticket with a QR code and unique ticket reference, according to the configured implementation.
FR-4	Ticket Tracking & Notification	• Allow passengers to view or access generated ticket details where supported by the portal. • Send a booking confirmation notification with ticket reference or access instructions.

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The booking form and portal should be simple and guided so passengers can book tickets without extensive training.
NFR-2	Security	Role-based access controls should protect passenger and ticket details so users can access only authorized records.
NFR-3	Reliability	Valid bookings and ticket records should be processed without losing data; booking notifications should be delivered consistently.
NFR-4	Performance	The portal, booking form, fare calculation, and ticket submission should respond promptly under normal load.
NFR-5	Availability	The booking portal should remain accessible when required, subject to ServiceNow platform availability and maintenance.
NFR-6	Scalability	Station lists, fare rules, booking records, and workflow logic should support growth without requiring a complete redesign.
