User Acceptance Testing (UAT) Template

Date	17 October 2026
Project Name	Metro Ticket Generating System using ServiceNow
Maximum Marks	4 Marks

Project Overview

Project Name: Metro Ticket Generating System using ServiceNow
Project Description: Digitizes metro ticket booking through ServiceNow. Passengers select source and destination stations and travel details; the system validates inputs, calculates fares using configured rules, processes booking through Flow Designer, generates a QR-code digital ticket, and sends booking confirmation through Notifications.
Project Version: v1.0 (proposed MVP)
Testing Period: To be decided

Testing Scope

• Service Catalog item for Metro Ticket Booking and journey detail capture.
• Required-field validation and source/destination validation.
• Automatic fare calculation based on configured station/fare rules.
• Flow Designer booking workflow and ticket record creation.
• QR-code digital ticket generation and ticket details.
• Booking confirmation notification and authorized ticket access.

Testing Environment

URL/Location: Your ServiceNow instance / portal URL (fill in actual URL)
Credentials: Test passenger account provided by the ServiceNow administrator; do not include passwords in this report.

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Book a ticket with valid details	1. Open the ServiceNow portal. 2. Open Metro Ticket Booking. 3. Select source and destination stations. 4. Enter travel details and submit.	Booking request is accepted and a booking/ticket record is created.	To be recorded after execution	Pending
TC-002	Required field validation	1. Open the booking form. 2. Leave a required field blank. 3. Submit the form.	Submission is blocked and a clear validation message appears.	To be recorded after execution	Pending
TC-003	Source and destination validation	1. Select the same station as source and destination. 2. Submit the form.	System prevents the invalid journey or asks the passenger to select a different station.	To be recorded after execution	Pending
TC-004	Automatic fare calculation	1. Select a supported station pair. 2. Review the fare before submitting.	Fare is calculated and displayed according to configured fare rules.	To be recorded after execution	Pending
TC-005	Flow Designer booking workflow	1. Submit a valid booking. 2. Inspect the flow execution and created record.	Configured flow processes the booking successfully and stores the ticket details.	To be recorded after execution	Pending
TC-006	QR-code ticket generation	1. Complete a valid booking. 2. Open the generated ticket details.	A digital ticket and QR code are available and readable according to the implementation.	To be recorded after execution	Pending
TC-007	Booking notification	1. Complete a valid booking. 2. Check the configured notification channel.	Passenger receives confirmation and ticket reference/access details.	To be recorded after execution	Pending
TC-008	Ticket access control	1. Log in as a different test passenger. 2. Attempt to access another passenger's ticket.	Access is denied unless the user has authorized access.	To be recorded after execution	Pending

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Fare is not calculated correctly or is missing	1. Submit a valid station pair. 2. Open the created ticket/booking record. 3. Check the fare field.	High	To be confirmed	Verify configured fare rules and calculation logic.
BG-002	Booking/ticket record is not created by the flow	1. Submit a valid booking. 2. Inspect Flow Designer execution and ticket records.	High	To be confirmed	Check flow trigger, conditions, permissions, and record creation.
BG-003	QR code or confirmation notification is missing	1. Submit a valid booking. 2. Open ticket details and check notification delivery.	Medium	To be confirmed	Verify QR-generation configuration and notification conditions.

Notes

• Include both positive and negative test scenarios.
• Record actual results and mark Pass/Fail only after executing each test in the implemented ServiceNow instance.
• Update bug severity and status from the actual defect log.
• Obtain sign-off from the project manager and product owner before deployment.
